

Open Drainage Channels

Keep them free & clear of debris!

Open drainage channels are part of our storm water drainage system. Any debris, including leaves, trash, and structures placed in an open drainage channel can increase the risk of localized flooding and the addition of pollutants to the receiving streams and rivers.

Any home owner with an open drainage channel located on their property is required by City Ordinance Chapter 78, Section 78-603-604 to keep the channel free and clear of any material that may contaminate or retard the flow of water.
